13. ABSTRACT (*Maximum 200 words*)

This report is a part of the documentations which describe the complete development of an STTR Phase II effort entitled, "Development of the Aerodynamic/Aeroservoelastic Modules in ASTROS." This report is one of four manuals that comprise the final report. The remaining reports consist of the ZAERO User's Manual (Volume I), the ZAERO Applications Manual (Volume III) and the ZAERO Theoretical Manual (Volume IV).

ASTROS* is the seamless integration of the ZAERO module into ASTROS. As an aerodynamic enhancement to ASTROS, ZAERO is the ZONA aerodynamic module, unified for all Mach number ranges. This manual assumes the reader is familiar with the ASTROS system architecture, terminology and programming environment. In particular, it is geared toward system administrators and/or programmers working within the ASTROS* environment.

First, an overview of ZAERO and ASTROS* is presented. The modified system generation (SYSGEN) input for ASTROS* accommodating the ZAERO module is presented next, along with an ASTROS* system generation flow chart. Third, nine ZAERO engineering application modules within the ASTROS* environment are described. Lastly, the ZAERO specific relational and matrix database entity descriptions are presented.

FOREWORD

This interim report is submitted in fulfillment of CDRL CLIN 0001, Data Item A009, Title: Interface Design Document of a Small Business Technology Transfer (STTR) contract No. Contract No. F33615-96-C-3217 entitled, "Development of the Aerodynamic/Aeroservoelastic Modules in ASTROS," covering the performance period from 24 September 1996 to 24 September 1998. This document provides the programmer's documentation for the ZAERO module in ASTROS*.

This work was performed by ZONA Technology, Inc. and its subcontractors, the University of Oklahoma (Research Institute)/Technion (I.I.T) and Universal Analytics Inc. This work is the second phase of a continuing two-phase STTR contract supported by AFRL/Wright-Patterson. The first phase STTR contract No. F33615-95-C-3219 entitled, "Enhancement of the Aeroservoelastic Capability in ASTROS," was completed in May 1996 and published as WL-TR-96-3119. Started in September 1996, the present second phase STTR contract was conducted by the same team members as in phase I. These contributors are: P.C. Chen (P.I.), D. Sarhaddi and D.D. Liu of ZONA Technology Inc.; Fred Striz of the University of Oklahoma; Moti Karpel of Technion/I.I.T.; and Tony Shimko and Steve Chen of Universal Analytics.

This STTR contract is sponsored by AFRL/Wright-Patterson. Capt. Gerald Andersen is the contract monitor and Dr. V.B. Venkayya is the initiator of the whole STTR effort. During the course of the present phase on the development of ASTROS*, the technical advice and assistance received from Mr. Doug Neill of The MacNeal Schwendler Corporation, Dr. V.B. Venkayya and others from AFRL are gratefully acknowledged.

1.0 INTRODUCTION

There are four major documents that describe the ZONA Aerodynamics Module (ZAERO) Module which has been seamless integrated into the Automated STRuctural Optimization System (ASTROS). These are: the ZAERO User's, Programmer's, Application and Theoretical Manuals for ASTROS*. While ZAERO represents the ZONA Aerodynamics Module, ASTROS* is defined as the seamless integration of ZAERO into ASTROS, i.e. ASTROS* = ZAERO + ASTROS. This Programmer's Manual gives the detailed description of the ZAERO software and its interface with the ASTROS system. Newly created database entities in support of the ZAERO module within ASTROS* are described. Newly developed engineering application modules comprising the ZAERO module are presented in detail.

This manual assumes that the user is familiar with the ASTROS system (Version 11.0), its terminology and programming environment. A complete and comprehensive description of the ASTROS environment can be found in the ASTROS User's and Programmer's Manuals (Refs 1,2). In particular, this manual is geared toward system administrators and/or programmers within the ASTROS* enviroment.

Section 2 presents an overview of the ZAERO software, its aerodynamic capability over that of the previous modules in ASTROS, and the program architecture of ZAERO in relation to ASTROS.

Section 3 presents the computer files delivered under this contract which contain all of the subroutines of the ZAERO module, the modified System Generation (SYSGEN) input for ASTROS*, and the ASTROS* system generation process.

Section 4 presents the ZAERO engineering application modules (altogether nine modules) that make up ZAERO within the ASTROS* environment. Together with the ASTROS* object library, these ZAERO engineering applications modules constitute the entire ASTROS* executable (see ASTROS* system generation flow chart).

Section 5 presents the ZAERO specific relational and matrix database entity descriptions established upon building of the ASTROS* system that are used for communication of data among the ZAERO engineering application modules.

2.0 ZAERO MODULE AND ASTROS*

ASTROS (Automated STRuctural Optimization System) is a finite element based procedure tailored for the preliminary design of aerospace structures. As such, it includes flexibility and generality in multiple discipline integration. For aircraft, missile or spacecraft design, the unique attributes of ASTROS lie in its savings of design effort and time, improvement in flight performance and reduction in structural weight. In principle, ASTROS was aimed at the effective multidisciplinary interactions between aerodynamics, aeroelastics, structures and other modules. Although today a well-aclaimed, proven tool for Multidisciplinary Optimization (MDO) and analysis, ASTROS still requires further improvement in its capabilities in steady/unsteady aerodynamics, aeroelasticity and aeroservoelasticity (e.g. Ref 3).

The ZONA aerodynamic codes contained in the ZAERO module are the software products of ZONA Technology developed throughout the years. These include four major steady/unsteady aerodynamics codes, namely ZONA6, ZONA7, ZTAIC, and ZONA7U, that jointly cover the complete domain of all Mach number ranges. The ZONA aerodymanic system (the ZAERO System) which contains the ZAERO module and two other modules were developed under the support of AFRL/Wright-Patterson AFB for their seamless integration into the ASTROS system to improve and enhance the capability of ASTROS in aerodynamics, aeroelasticity and aeroservoelasticity (ASE). In particular, the ZAERO module improves the aerodynamics capability over the earlier aerodynamics modules in ASTROS in the following aspects (also see Figs 1 and 2):

1. Wing-Body geometry input for realistic aircraft configurations including external stores.
2. Flight regimes that include subsonic, supersonic, transonic and hypersonic Mach numbers.
3. High-order paneling scheme to assure accurate and robust solutions (without stringent paneling requirements).
4. Provides Aerodynamic Influence Coefficient (AIC) matricies for all flow regimes including the generation of transonic AIC.
5. Steady/unsteady aerodynamic options for static and dynamic aeroelastic applications.
6. Unified aerodynamic geometry bulk data input.

The development and seamless integration of the the ZAERO System into ASTROS has created a unique Multidisciplinary Design/Analysis and Optimization (MDO/MAO) tool that is currently unsurpassed in its steady/unsteady aerodynamic and aeroelastic capability. The ZAERO System consists of essentially three modules which include the ZAERO module, the AGM (aerodynamic geometry module) and the 3D-Spline module (see Fig 3).

As can be seen in Fig 1, current capabilities of ASTROS and NASTRAN are limited to subsonic and supersonic Mach numbers and applicable to lifting surfaces only. By contrast, ZAERO is valid throughout the full range of subsonic to hypersonic Mach numbers and is applicable to complex aircraft configurations with external stores.

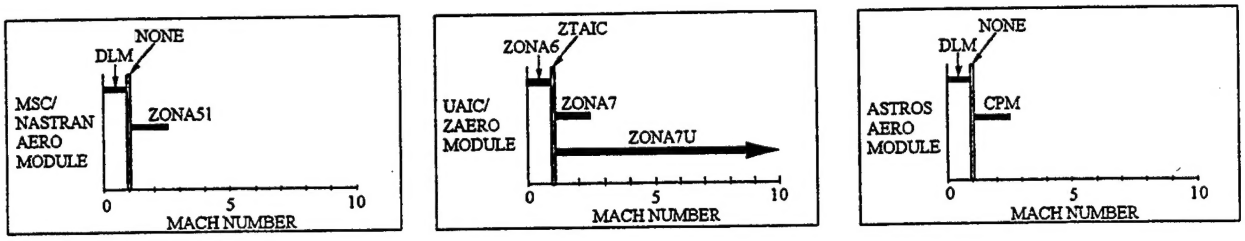

Figure 1. ZAERO and Other Aerodynamic Modules.

Fig 2 shows the capability of each code in the ZAERO Module (marked with †) along with other ZONA Codes.

Capability		ZONA Unsteady/Steady Aerodynamic Codes – ZAERO						
		ZONA51	*ZONA51U*	*ZONA7*†	*ZONA7U*†	*ZONA6*†	*ZTAIC*†	*ZTAIC6*

	• Transonic						●	●
	• Supersonic	●	●	●	●			
	• Hypersonic		●		●			

Figure 2. Capability of the ZAERO Module.

The seamlessly integrated ZAERO System in ASTROS is called ASTROS*. Fig 3 illustrates the role of the ZAERO System within ASTROS* and the overall ASTROS* program architecture. The ZAERO System consists of three primary modules with the following functionalities:

- *Unified Aerodynamic Geometry Module (AGM)*
  The Unified Aerodynamic Geometry Module processes the ZAERO model aerodynamic geometry input. Two newly created bulk data entries are used to define the aerodynamic geometry, namely **CAERO7** for wing-like components such as wings, tails, pylons, launchers and store fins, and **BODY7** for body-like components such as fuselage, stores and missile bodies.

- *3-D Spline Module*
  The 3-D Spline Module provides for the interconnection between the aerodynamic and structural models through the generation of spline matricies. Three spline methods are supported by this module. These are the infinite plate spline (IPS) method (**SPLINE 1**), the beam spline method (**SPLINE 2**) and the thin plate spline (TPS) method (**SPLINE 3**). The TPS

is an addition to the spline capability provided by ASTROS and unlike the IPS method does not require that a spline plane be defined.

- *The ZAERO Module*
  The ZAERO Module is made up of the four major aerodynamic codes (ZONA6, ZONA7, ZTAIC, ZONA7U) and generates the Unified Aerodynamic Influence Coefficient (UAIC) matrices, gust force vectors, control surface aerodynamic vectors and steady aerodynamic force vecotrs of trim parameters.

Database entities generated by AGM, 3-D Spline and ZAERO modules are computed in the ASTROS* preface phase and are not recomputed in the analysis/optimization loop.

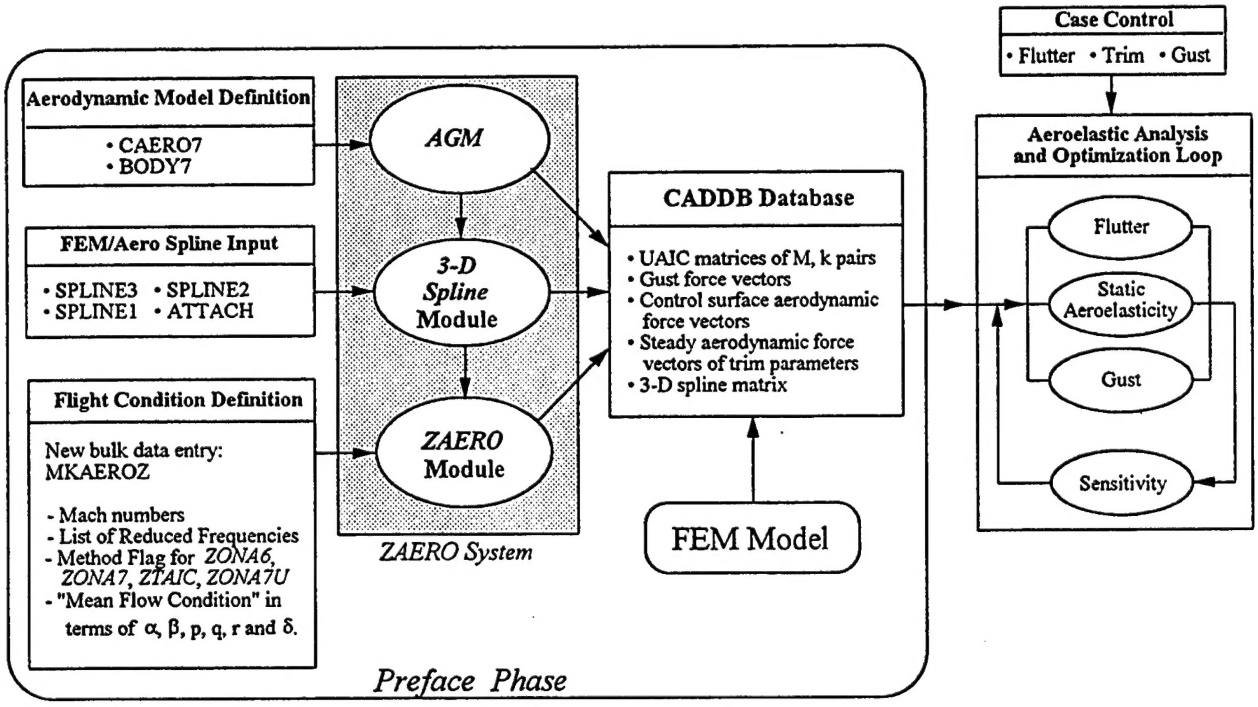

Figure 3. ASTROS/ZAERO (ASTROS*) Program Architecture.

3.0 ASTROS* SYSTEM GENERATION

3.1 Generation of the ASTROS* System

The ASTROS System Generation Process (SYSGEN) has been modified to include the compilation of the ZAERO module source code and the linking of the ZAERO module object code into the ASTROS system. For ease of use, the system generation process has been kept the same as that of ASTROS (Version 11.0). The change made to this process to incorporate the ZAERO module are:

1. Updates to the SYSGEN input files (described in Sections 3.2.1 through 3.2.5)
2. Modified script file **Makexqdriv** for compiling the ZAERO module source code (described in Section 3.1.1)
3. Modified script file **Makeastros** for linking of the ZAERO module object code into the ASTROS* system (described in Section 3.1.2)

The entire SYSGEN process is depicted in Figure 4 and is briefly outlined as follows.

The modified SYSGEN input files (1) are processed by SYSGEN (2). SYSGEN generates the ASTROS* System Database (SYSDB) (3), SYSGEN output file (4) and the fortran source code XQDRIV (5). Both the ZAERO engineering applications modules (6) and XQDRIV source code (5) are compiled by the **Makexqdriv** script file (7). The object library of ASTROS (Version 11.0) (8) and object files generated by **Makexqdriv** (7) are linked via the **Makeastros** script file called by **astlink** (9) to generate the ASTROS* Executable Image (10). The ASTROS* System Database (3) and ASTROS* Executable (10) make up the ASTROS* system.

3.1.1 Compiling the ZAERO Module

The Makefile (**Makexqdriv**) used to compile the **XQDRIV** file generated by SYSGEN and located in the ASTROS (Version 11.0) sysgen directory has been updated to compile the ZAERO source files listed in Table 1 (see Figure 5). Should any modifications to the source code be required, the corresponding files where changes are made must be re-compiled in **Makexqdriv**. If no changes are made and the user wishes to re-build the ASTROS* system, it is not necessary to re-compile these files. Therefore all corresponding lines in **Makexqdriv** can be commented out to speed up the ASTROS* regeneration process.

3.1.2 Linking the ZAERO Module

The Makefile (**Makeastros**) called by the **astlink** script file to relink ASTROS* and located in the ASTROS (Version 11.0) sysgen directory has been updated to link the ZAERO object files generated upon the compilation in **Makexqdriv** (see Figure 6).

3.2 ZAERO Sysgen Input

To facilitate the ASTROS* system generation described in Section 3.1, the five SYSGEN input data files, namely **MODDEF.DAT, MAPOLSEQ.DAT, TEMPLATE.DAT, RELATION.DAT** and **SERRMSG.DAT**, have been modified to include all components necessary for integration of ZAERO in ASTROS*. Modifications to each of these files are described in the following subsections. The physical changes made to each of these files are presented in Appendicies A through E, respectively.

3.2.1 Functional Module Definintion (MODDEF.DAT)

The ASTROS* run-time library of MAPOL addressable modules file (**MODDEF.DAT**) has been updated to account for all newly developed engineering application modules presented in Section 5. These module definitions provide the additional links between the ASTROS* executive system and the ZAERO engineering application modules. The ZAERO functional module defintions are presented in Appendix A. For a detailed description of this file, please see Ref 2.

3.2.2 MAPOL Sequence (MAPOLSEQ.DAT)

For seamless integration of ZAERO into ASTROS, the ASTROS MAPOL sequence (file **MAPOLSEQ.DAT**) has been modified. The complete ASTROS* MAPOL sequence listing is presented in Appendix B. All changes to the original ASTROS (Version 11.0) MAPOL sequence listing are highlighted in boldface text and are demarcated by arrows on the right. For a detailed description of this file, please see Ref 2.

3.2.3 Bulk Data Template Definition (TEMPLATE.DAT)

In the development of the ZAERO module, twenty three new bulk data entries were created. Bulk data template definitions for these new bulk data entries were added to those of ASTROS (Version 11.0) and are presented in Appendix C. For a detailed description of this file, please see Ref 2.

3.2.4 Relational Schema Definition (RELATION.DAT)

Schema definitions of all relational database entities used by the ZAERO module have been defined in file RELATION.DAT. These relational entity schema definitons are presented in Appendix D. For a detailed description of this file, please see Ref 2.

3.2.5 Error Message Text Definition (SERRMSG.DAT)

Three new error message definition modules have been developed corresponding to the following engineering application modules: AEROGM, SPLINZ and ZAEROM. These ZAERO error message module definitions are presented in Appendix E. For a detailed description of this file, please see Ref 2.

3.3 The ZAERO Software

Under the current contract, six computer files containing all ZAERO engineering application and utility modules are delivered. These six files along with corresponding file descriptions are listed in Table 1. These files contain all of the ZAERO engineering application modules.

Table 1. Computer Files Comprising ZAERO.

File Name	Description	File Type
aerogm.f	Code for processing of the wing/body aerodynamc geometry used by all ZAERO aerodynamic methods	source
fltqhz.f	Code for processing of matrices required for flutter analysis, including a newly developed K-method	source
splinz.f	Code for processing of spline matrices	source
utility.f	Additional math matrix in-core solvers	source
zaerom.f	Steady and unsteady aerodynamics processing for all of ZAERO's aerodynamic methods	source
zaerolib.o	ZONA's aerodynamic kernels	object

Note that all source code of ZAERO developed and integrated into ASTROS under this contract is being furnished to AFRL. The zaerolib.o code was developed prior to the current STTR Phases I & II and is ZONA Technology proprietary. This file is delivered in object code format only for specified computer platforms. To acquire updated object code for different computer platforms, please contact ZONA Technology at (602) 945-9988, POC: Darius Sarhaddi.

4.0 ZAERO ENGINEERING APPLICATION MODULES

Nine new engineering application modules have been developed as the ZAERO interface to ASTROS. The modules along with a brief functional descriptions are presented in Table 2.

Table 2. ZAERO Engineering Application Modules.

Module Name	Function
AEROGM	Aerodynamic Geometry Module
CONMOD	Control Surface Modes Generation
FLUTQHHZ	Process matrix [AJK] with normal modes for flutter
FLUTSENZ	To compute the sensitivities of active flutter constraints in the current boundary condition
FLUTTRAZ	Perform flutter analysis in the current boundary condition and to evaluate any flutter constraints if it is an optimization boundary condition with applied flutter constraints
QHHLGENZ	Compute the unsteady aerodynamic matricies in the modal dynamic degrees of freedom for gust analysis
SPLINZ	Generate the spline matrix that relates displacements and forces between the structural model and aerodynamic models
SZAERO	Generate steady aerodynamic AIC matrices and aerodynamic forces of unit configurations
UZAERO	Unsteady aeroelastic analysis preface

For ease of understanding, these new engineering modules are documented in the same format as those presented in the ASTROS Programmer's Manual (Ref 2). The modules presented provide the programmer a general description of the algorithm and clearly defines the module's arguments. In addition, the purpose, MAPOL calling sequence, FORTRAN subroutine name and method (i.e. function) of the module is presented. In cases of similar methods employed by modules to those of ASTROS (Version 11.0), the user is referred to the ASTROS Programmer's Manual (Ref 2).

Engineering Application Module: **AEROGM**

Entry Point: **AEROGM**

Purpose:

ZAERO geometry preface module.

MAPOL Calling Sequence:

```
CALL AEROGM  (  AECOMPZ, GEOMZA, AGRIDZ  );
```

AECOMPZ	A relation describing aerodynamic components (Output)
GEOMZA	A relation describing the aerodynamic boxes (Output)
AGRIDZ	A relation describing the corner points of aerodynamic boxes (Output)

Application Calling Sequence:

None

Method:

The **AEROGM** module processes all **BODY7** and **CAERO7** bulk data entries and computes the geometric data stored in the relational entites **AECOMPZ**, **GEOMZA**, and **AGRIDZ**. These relational entites are to be used by the **CONMOD**, **SPLINZ**, **UZAERO**, and **SZAERO** modules.

Design Requirements:

The **AEROGM** module is excuted in the preface phase. It is the aerodynamic geomety module for the **ZAERO** module.

Error Conditions:

None

Engineering Application Module: **CONMOD**

Entry Point: **CONMOD**

Purpose:

Control surface modes generation.

MAPOL Calling Sequence:

```
CALL CONMOD ( AECOMPZ, GEOMZA, [SCNTLG], [SCNTLK], [ACNTLG], [ACNTLK],
              [LMODG], [LMODK] );
```

AECOMPZ	A relation created by the **AEROGM** module describing aerodynamic components (Character, Input)
GEOMZA	A relation created by the **AEROGM** module describing the aerodynamic boxes (Character, Input)
[SCNTLG]	Matrix whose rows contain the symmetric control surface modes defined at the G-set D.O.F. and columns are associated with the **AESURFZ** bulk data entries. [SCNTLG] is used to compute the inertia loads by unit deflection angle of control surfaces. (Output)
[SCNTLK]	Matrix whose rows contain the symmetric control surface modes defined at the K-set D.O.F. and columns are associated with the **AESURFZ** bulk data entries. [SCNTLK] is used to compute the unsteady aerodynamic forces [AJC] and steady aerodynamic forces [AIRFRC] by unit deflection angle of the control surfaces. (Output)
[ACNTLG]	Same as [SCNTLG] but for antisymmetric control surface modes (Output)
[ACNTLK]	Same as [SCNTLK] but for antisymmetric control surface modes (Output)
[LMODEG]	Matrix whose rows contain the load modes at the G-set D.O.F. and columns are associated with the **LOADMOD** bulk data entries (Output)
[LMODEK]	Matrix whose rows contain the load modes at the K-set D.O.F. and columns are associated with the **LOADMOD** bulk data entries (Output)

Application Calling Sequence:

None

Method:

First, the **CONMOD** module processes all **AESURFZ** bulk data entries (if there are any) and generates the control surface modes due to unit deflection angle of the control surfaces about the hinge lines in both G-set and K-set D.O.F. If TYPE = 'SYM' or 'ASYM', the control surface modes are stored in [SCNTLG] and [SCNTLK]. If TYPE = 'ANTISYM', the control surface modes are stored in [ACNTLG] and [ACNTLK].

Next, the **CONMOD** module processes all **LOADMOD** bulk data entries (if there are any) and generates the load modes of each **LOADMOD**. The load modes are defined in the G-set and K-set D.O.F. and stored in each row of the matrix [LMODEG] and [LMODEK], respectively.

Design Requirements:

None

Error Conditions:

None

Engineering Application Module: **FLUTQHHZ**

Entry Point: **FLTQHZ**

Purpose:

Processes matrix **[AJK]** with normal modes for flutter.

MAPOL Calling Sequence:

```
CALL FLUTQHHZ (  NITER, BCID, SUB, ESIZE(BC), PSIZE(BC), [AJK], [SKJ],
                 [UGTKA], [PHIA], USET(BC), [TMN(BC)], [GSUBO(BC)], NGDR,
                 AECOMPZ, GEOMZA, [PHIKH], [QHHLFL(BC, SUB)], OAGRDDSP  );
```

NITER	Design iteration number (Integer, Input)
BCID	Boundary condition number (Integer, Input)
SUB	Flutter subcase number (Integer, Input)
ESIZE(BC)	Number of extra points for the current boundary condition (Integer, Input)
PSIZE(BC)	Number of physical degrees of freedom in the current boundary conditions (GSIZE+ESIZE) (Integer, Input)
[AJK]	Unsteady AIC matrices generated by the **UZAERO** module (Input)
[SKJ]	Integration matrix generated by the **UZAERO** module (Input)
[UGTKA]	The matrix of splining coefficients relating the aerodynamic pressures and forces at the structural grids and relating the structural displacements to the streamwise slopes of the aerodynamic boxes. **[UGTKA]** is reduced to the a-set DOF from **[UGTKG]**. (Input)
[PHIA]	Matrix of normal modes eigenvectors in the a-set (Input)
USET(BC)	Current boundary condition's unstructured entity of set definition masks (expanded to include extra points and any **GDR** scalar points) (Input)
[TMN(BC)]	Multipoint constraint transformation matrix for the current boundary condition (Input)
[GSUBO(BC)]	Static condensation or **GDR** reduction matrix for the current boundary condition (Input)
NGDR	Denotes dynamic reduction in the boundary condition = 0 No **GDR** = -1 **GDR** is used (Input, Integer)
AECOMPZ	A relation describing aerodynamic components created by the **AEROGM** module (Character, Input)

GEOMZA	A relation describing the aerodynamic boxes created by the **AEROGM** module (Character, Input)
[PHIKH]	A modal tranformation matrix that relates the box-on-box aerodynamic motions to unit displacements of the generalized structural coordinates (modes) (Output)
[QHHLFL(BC, SUB)]	A matrix containing the list of h x h unsteady aerodynamics matrices for the current flutter subcase related to the generalized (modal) coordinates and including control effectiveness (**CONEFFS**), extra points and **CONTROL** matrix inputs, where **BC** represents the MAPOL boundary condition loop index number (Output)
OAGRDDSP	A relation containing the structural eigenvectors (generalized DOF) mapped to the aerodynamic boxes for those **AIRDISP** requests in the Solution Control. These terms are the columns of **PHIKH** put in relational form to satisfy the output requests. (Output)

Application Calling Sequence:

None

Method:

FLUTQHHZ is very similar to the **FLUTQHHL** module (see **FLUTQHHL** Engineering Application Module of ASTROS Programmer's Manual for description of Method). There are only two differences between these two modules.

1. **FLUTQHHZ** reads in **[AJK]** and **[SJK]** matrices and computes the **QKK** matrices as

   $$[QKK] = [SJK]^T [AJK]^T$$

   then computes the generalized aerodynamic forces as

   $$[QHHLFL] = [PHIKH]^T [QKK] [PHIKH]$$

   therefore, the **[QKK]** matrix is a intermidiate matrix created in **FLUTQHHZ**. However, the actual procedure to compute **[QHHLFL]** in the **FLUTQHHZ** is described in ENTITY DESCRIPTIONS of **AJK**

2. **FLUTQHHZ** uses the relational entity **REUNMK** to retrieve the AIC matrices of the Mach number and associated reduced frequencies as defined in the **IDMK** of the **FLUTTER** bulk data entry.

Engineering Application Module: **FLUTSENZ**

Entry Point: **FLTSTZ**

Purpose:

To compute the sensitivities of active flutter constraints in the current boundary condition.

MAPOL Calling Sequence:

```
CALL FLUTSENZ (  NITER, BC, SUB, LOOP, GSIZEB, NDV, GLBDES, CONST, GMKCT,
                 DKVI, GMMCT, DMVI, CLAMBDA, LAMBDA, [QHHLFL(BC, SUB)],
                 [BHHFL(BC, SUB)], [KHHFL(BC, SUB)], [PHIG(BC)], [AMAT],
                 AEROZ  );
```

NITER	Design iteration number (Integer, Input)
BC	Boundary condition identification number (Integer, Input)
SUB	Flutter subcase number (Integer, Input)
LOOP	Logical flag indicating whether more flutter subcases exist in the current boundary condition (Logical, Input)
GSIZEB	The size of the structural set (Integer, Input)
NDV	The number of global design variables (Integer, Input)
GLBDES	Relation of global design vaiables (Character, Input)
CONST	Relation of constraint values (Character, Input)
GMKTC	Relation containing the connectivity data for the **DKVI** sensitivty matrix (Character, Input)
DKVI	Unstructured entity containing the stiffness design sensitivity matrix in a highly compressed format (Character, Input)
GMMCT	Relation containing connectivity data for **DMVI** sensitivity matrix (Character, Input)
DMVI	Unstructured entity containing the mass design sensitivity matrix in a highly compressed format (Character, Input)
CLAMBDA	Relation containing results of flutter analysis (Character, Input)
LAMBDA	Relation containing the output from the real eigenanalysis (Character, Input)
[QHHLFL(BC, SUB)]	A matrix containing the list of h x h unsteady aerodynamics matrices for the current flutter subcase related to the generalized (modal) coordinates and including control effectiveness (**CONEFFS**), extra points and **CONTROL** matrix inputs, where **BC** represents the MAPOL boundary condition loop index number (Input)

[MHHFL(BC, SUB)]	Modal mass matrix (Input)
[BHHFL(BC, SUB)]	Modal flutter damping matrix (Input)
[KHHFL(BC, SUB)]	Modal flutter stiffness matrix (Input)
[PHIG(BC)]	Matrix of real eigenvectors in the structural set (Input)
[AMAT]	Matrix of constraint sensitivities (Output)
AEROZ	Relation containing the definition of the aerodynamic coordinate system (Input)

Application Calling Sequence:

None

Method:

FLUTSENZ is very similar to the **FLUTSENS** module (see **FLUTSENZ** Engineering Application Module for description of Method). There is only one difference between these two modules. **FLUTSENZ** uses the relational entity **REUNMK** to retrieve the AIC matrices of the Mach number and associated reduced frequencies as defined in the **IDMK** of the **FLUTTER** bulk data entry.

Design Requirements:

The module assumes that at least one flutter subcase exists in the current boundary condition.

Error Conditions:

None.

Engineering Application Module: **FLUTTRAZ**

Entry Point: **FLTTAZ**

Purpose:

To perform flutter analyses in the current boundary condition and to evaluate any flutter constraints if the current boundary condition is an optimization boundary condition with applied flutter constraints.

MAPOL Calling Sequence:

```
CALL FLUTTRAZ  ( NITER, BCID, SUB, [QHHLFL(BC, SUB)], LAMBDA, HSIZE(BC),
                 ESIZE(BC), GMKCT, [MHHFL(BC, SUB)], [BHHFL(BC, SUB)],
                 KHHFL(BC, SUB)], CLAMBDA, AEROZ  );
```

NITER	Design iteration number (Integer, Input)
BCID	User defined boundary condition identification number (Integer, Input)
SUB	Flutter subcase number (ranging from 1 to the total number of **FLUTTER** subcases) of the subcase to be processed in this pass (Integer, Input)
[QHHLFL(BC, SUB)]	Matrix list of modal unsteady aerodynamic coefficients (Input)
LAMBDA	Relational entity containing the output from the real eigenanalysis (Character, Input)
HSIZE(BC)	Number of modal dynamic degrees of freedom in the current boundary condition (Input)
ESIZE(BC)	The number of extra point degrees of freedom in the current boundary condition (Integer, Input)
[MHHFL(BC, SUB)]	Modal mass matrix (Input)
[BHHFL(BC, SUB)]	Modal flutter damping matrix (Input)
[KHHFL(BC, SUB)]	Modal flutter stiffness matrix (Input)
CLAMBDA	Relation containing results of flutter analyses (Character, Input)
AEROZ	Relational entity of the configuration parameters defined by the **AEROZ** bulk data entry (Character, Input)

Application Calling Sequence:

None

Method:

FLUTTRAZ is very similar to the **FLUTTRAN** module (see **FLUTTRAN** Engineering Application Module of the ASTROS Programmer's Manual for a description of the Method). The difference is that rather than processing the **UNMK** unstructured entity, **FLUTTRAZ** reads the relational entity **REUNMK** for retrieving the Mach number and reduced frequency pairs.

Design Requirements:

The module assumes that at least one flutter subcase exists in the current boundary condition.

Error Conditions:

Referenced data on **FLUTTER** entries that do not exist on the database are flagged and the execution is terminated.

Engineering Application Module: **QHHLGENZ**

Entry Point: **QHJGEN**

Purpose:

To compute the unsteady aerodynamic matrices in the modal dynamic degrees of freedom for gust analysis.

MAPOL Calling Sequence:

```
CALL QHHLGENZ (  BC, ESIZE(BC), [AJK], [SKJ], [QGK], [UGTKA], [PHIA],
                 [PHIKH], [QHHL], [QHJL], AEROZ  );
```

BC	Boundary condition identification number (Integer, Input)
ESIZE(BC)	The number of extra point degrees of freedom in the boundary condition (Integer, Input)
[AJK]	Unsteady AIC matrices generated by the **UZAERO** module (Input)
[SKJ]	Integration matrix generated by the **UZAERO** module (Input)
[QGK]	A matrix contaning the intermediated gust vectors generated by the **UZAERO** module (Input)
[UGTKA]	The matrix of splining coefficients relating the aerodynamic pressures and forces at the structural grids and relating the structural displacements to the streamwise slopes of the aerodynamic boxes reduced to the a-set DOF. Generated by the **SPLINZ** module. (Input)
[PHIA]	Matrix of normal modes eigenvectors in the a-set (Input)
[PHIKH]	A modal tranformation matrix that relates the box-on-box aerodynamic motions to unit displacements of the generalized structural coordinates (modes) (Output)
[QHHL]	A matrix containing the list of h x h unsteady aerodynamics matrices of each reduced frequency for the current gust subcase related to the generalized (modal) coordinates (Output)
[QHJL]	A matrix containing the list of h x 1 unsteady hormonic gust vector of each reduced frequency (Output)
AEROZ	A relation containing the definition of the aerodynamic coordinate system (Input)

Application Calling Sequence:

None

Method:

QHHLGENZ is very similar to the **QHHLGEN** module (see **QHHLGEN** Engineering Application Module of the ASTROS Programmer's Manual for a description of the Method). There are only two differences between these two modules.

1. **QHHLGENZ** reads in **[AJK]** and **[SJK]** matrices and computes the **QKK** matrices as

   $$[QKK] = [SJK]^T [AJK]^T$$

   then computes the generalized aerodynamic forces as

   $$[QHHL] = [PHIKH]^T [QKK] [PHIKH]$$

   therefore, the **[QKK]** matrix is a intermediate matrix created in **QHHGENZ**.

2. The gust vector is computed as:

   $$[QHJL] = [PHIKH]^T [QGK] \exp(i*k/(\mathbf{REFC}/2.)*x_o)$$

   where k is the reducred frequency.
   REFC is the reference chord.

   and x_o is the location of thereference plane defined in the **GUST** bulk entry.

3. **QHHLGENZ** uses the relational entity **REUNMK** to retrieve the AIC matrices of the Mach number and associated reduced frequencies as defined in the **IDMK** of the **GUST** bulk data entry.

Engineering Application Module: **SPLINZ**

Entry Point: **SPLINZ**

Purpose:

Generates the spline matrix that relates displacements and forces between the structural model and the ZAERO aerodynamic model.

MAPOL Calling Sequence:

```
CALL SPLINZ ( GSIZEB, GEOMZA, AECOMPZ, AEROZ, [UGTKG]  );
```

`GSIZEB`	The number of degrees of freedom in the set of all structural GRID and SCALAR points (Integer, Input)
`GEOMZA`	A relation describing the aerodynamic boxes for the ZAERO model. The location of the box centroid, normal and pitch moment axis are given. It is used in splining the aerodynamics to the structure and to map responses back to the aerodynamic boxes. (Character, Input)
`AECOMPZ`	A relation describing aerodynamic components for the ZAERO model. It is used in splining the aerodynamics to the structural model. (Character, Input)
`AEROZ`	A relation created by the **AEROZ** bulk entry (Character, Input)
`[UGTKG]`	Spline matrix relating the structural displacements at G-set d.o.f to the displacements ans slopes at the K-set d.o.f of the aerodynamic boxes. (Output)

Application Calling Sequence:

None

Method:

The **SPLINZ** module is very similar to the **SPLINES** and **SPLINEU** modules (see ASTROS Programmer's Manual), except:

1. It only relates the aerodynamic boxes associated with **BODY7** and **CAERO7** to the structural model.
2. In addition to the **SPLINE1**, **SPLINE2** and **ATTACH** bulk data entries, it also reads the **SPLINE3** bulk data entry for 3D spline.
3. The spline matrix is used for both the steady and unsteady aeroelastic modules.

The spline matrix **[UGTKG]** is used for both steady aeroelastic analysis and dynamic aeroelastic analysis. For the definition of K-set d.o.f., please see entity descriptions of entity **UGTKG**.

Design Requirements:

None

Error Conditions:

1. Each aerodynamic box may appear on only one **SPLINE1**, **SPLINE2**, **SPLINE3** or **ATTACH** entry, although not all boxes need appear. Missing boxes will not influence the aeroelastic response.

2. Missing structural grids or aerodynamic elements appearing on the spline definitions will be flagged.

Engineering Application Module: **SZAERO**

Entry Point: **SZAERO**

Purpose:

Generates steady aerodynamic AIC matrices and aerodynamic forces of unit configuration parameters by the ZAERO module.

MAPOL Calling Sequence:

```
CALL SZAERO ( [AJK], MINDEX, LOOP, AECOMPZ, GEOMZA, AGRIDZ, STABCF,
[AICMAT(MINDEX)], [AAICMAT(MINDEX)], [AIRFRC(MINDEX)],
[SCNTLK], [ACNTLK] );
```

AJK	Unsteady AIC matrices generated by the **UZAERO** module (Input)
MINDEX	Mach number index for the current pass. Controls which Mach number/symmetry conditions will be processed in this pass by **SZAERO**. One pass for each unique Mach number will be performed with **MINDEX** incrementing by one until **SZAERO** returns **LOOP** = .FALSE. (Input)
LOOP	A logical flag set by **SZAERO** to indicate whether additional **MINDEX** subscripts are needed to complete the processing of all Mach number/symmetry conditions on all the **TRIM** bulk data entries. One pass for each unique Mach number will be performed with **MINDEX** incrementing by one until **SZAERO** returns **LOOP** = .FALSE. (Output)
AECOMPZ	A relation created by the **AEROGM** module describing aerodynamic components (Character, Input)
GEOMZA	A relation created by the **AEROGM** module describing the aerodynamic boxes (Character, Input)
AGRIDZ	A relation created by the **AEROGM** module describing the corner points of aerodynamic boxes (Character, Input)
STABCF	A relation of rigid aerodynamic stability coefficients for unit configuration parameters. The coefficients are stored in **STABCF** and the corresponding distributed forces are stored in **[AIRFRC(MINDEX)]**. The **STABCF** relation is used to pick the appropriate rigid loads from **[AIRFRC(MINDEX)]** when performing the aeroelastic trim as well as for retrieving the RIGID/FLEXIBLE stability coefficients for each configuration parameters. (Output)
[AICMAT(MINDEX)]	Matrix containing the steady aerodynamic influence coefficients for symmetric flight condition (Output)
[AAICMAT(MINDEX)]	Same as **[AICMAT(MINDEX)]** but for antisymmetric flight condition (Output)
[AIRFRC(MINDEX)]	Matrix containing the steady aerodynamic distributed forces for unit configuration parameters for the current Mach number index. If both symmetric and antisymmetric conditions exist for the Mach number, both sets of configuration parameters will coexist in **[AIRFRC]**. (Output)

[SCNTLK]	Matrix (created by the **CONMOD** module) whose rows contain the symmetric control surface modes defined at the K-set D.O.F. and columns are associated with the **AESURFZ** bulk data entries. **[SCNTLK]** is used to compute the aerodynamic stabilitiy coefficients and distributed forces contained in **STABCF** and **[AIRFRC]** by unit deflection of control surfaces. (Input)
[ACNTLK]	Same as **[SCNTLK]** but for antisymmetric control surface modes.

Application Calling Sequence:

None

Method:

The **SZAERO** module is very similar to the **STEADY** module (see ASTROS Programmer's Manual) except that **SZAERO** processes the aerodymanic geometry generated by the **AEROGM** module and computes the AIC matrices from ZONA6, ZONA7, ZTAIC, and ZONA7U methods for wing-body configurations. The output data format of **SZAERO** is identical to that of the **STEADY** module so that the output data can be directly used by the downstream steady aeroelatic trim modules.

The steady AIC matrices are obtained by taking the real part of the lowest reduced frequency of the matrix **[AJK]**, where **[AJK]** is generated by **UZAERO** module.

Design Requirements:

See **STEADY** module.

Error Conditions:

See **STEADY** module.

Engineering Application Module: **UZAERO**

Entry Point: **UZAERO**

Purpose:

Unsteady aeroelastic analysis preface by ZAERO module.

MAPOL Calling Sequence:

```
CALL UZAERO  ( AECOMPZ, GEOMZA, AGRIDZ, [AJK], [AJC], [AJL] [QGK], [SKJ],
               [SCNTLK], [ACNTLK], [LMODEK]  );
```

AECOMPZ	A relation created by the **AEROGM** module describing aerodynamic components (Character, Input)
GEOMZA	A relation created by the **AEROGM** module describing the aerodynamic boxes (Character, Input)
AGRIDZ	A relation created by the **AEROGM** module describing the corner points of aerodynamic boxes (Character, Input)
[AJK]	Matrix containing the transposed unsteady aerodynamic influence coefficient (AIC) matrices for all Mach, and reduced frequency pairs defined in all **MKAEROZ** bulk data entries (Output)
[AJC]	Matrix containing the unsteady pressure in J-set D.O.F. on aerodynamic boxes due to the control surface modes for all Mach number and reduced frequency pairs defined in all **MKAEROZ** bulk data entries (Output)
[AJL]	Matrix containing the unsteady pressure in J-set D.O.F. on aerodynamic boxes due to the load modes for all Mach number and reduced frequency pairs defined in all **MKAEROZ** bulk data entries (Output)
[QGK]	Gust matrix containing the intermediated gust force vectors at the K-set D.O.F. for all Mach number and reduced frequency pairs defined in all **MKAEROZ** bulk data entries (Output)
[SKJ]	Integration matrix to take pressures in J-set D.O.F. to forces in K-set D.O.F (Output)
[SCNTLK]	Matrix (created by the **CONMOD** module) whose rows contain the symmetric control surface modes defined at the K-set D.O.F. and columns are associated with the **AESURFZ** bulk data entries. **[SCNTLK]** is used to compute the unsteady aerodynamic forces **[AJC]** by unit deflection of control surfaces. (Input)
[ACNTLK]	Same as **[SCNTLK]** but for antisymmetric control surface modes (Input)
[LMODEK]	Matrix (created by **CONMOD** module) whose rows contain load modes defined at the K-set D.O.F. and columns are associated with the **LOADMOD** bulk data entries. **[LMODEK]** is used to compute the unsteady aerodynamic forces **[AJL]** of the load modes. (Input)

Application Calling Sequence:

None

Method:

The **UZAERO** module first reads in the relational entity **AEROZ** to check the symmetric condition of the aerodynamic geomertry. If **XZSYM** = 'YES', the symmetric AIC and antisymmetric AIC matrices will be generated regardless of whether they are required for the downstream unsteady aeroelastic modules. The AIC matrices are generated according to the input sequence of **MKAEROZ** bulk data entries. Each **MKAEROZ** will produce a set of AIC matrices at the given Mach number and its associated list of reduced frquencies. The geometric data of the aerodynamic model is based on the relations **AECOMPZ**, **GEOMZA**, and **AGRIDZ**.

The AIC matrices of Mach, reduced frequency, symmetry pairs are stored in **[AJK]**. **[AJC]** is computed by:

$$[AJC] = [AJK]^T [[SCNTLK], [ACNTLK]]$$

pre-mutiplied **[AJC]** by $[SKJ]^T$ will yield the control surface aerodynamic forces at K-set D.O.F.

The intermediated gust force vector **[QGK]** is computed by:

$$[QGK]=[SKJ]^T [AJK]^T \{\exp(-i*K*X/(REFC/2.)\}$$

where K is the reduced frequency.
X is the aerodynamic box control point locations.
REFC is the reference chord.

[AJL] is computed by:

$$[AJL] = [AJK]^T[LMODEK]$$

pre-mutiplied **[AJL]** by $[SKJ]^T$ will yield the load mode aerodynamic forces at K-set D.O.F.

The method to retrieve the **[AJK]** and **[AJC]**, and **[AJL]** matrices of a given Mach number, reduced frquency, and symmetry pair is described in relational entity **REUNMK**.

Design Requirements:

Unlike the **AMP** module, the **UZAERO** module does not generate the **[QKK]** matrix.
The **[QKK]** matrix is computed by the **FLUTQHHZ** module from:

$$[QKK] = [SKJ]^T[AJK]^T$$

The unsteady forces due to control surface modes (defined as **[QKC]**) can be computed by:

$$[QKC] = [SKJ]^T[AJC]$$

Error Conditions:

None

5.0 ZAERO DATABASE ENTITY DESCRIPTIONS

To facilitate the communication of data among the ZAERO engineering application modules, fifteen new database entities (11 Matrix and 4 Relational) are created and are presented in Table 3.

Table 3. ZAERO Database Entities.

Entity Name	Description	Type
AJC	Basic name of the unsteady aerodynamic matrix containing unsteady pressure coefficients at J-set d.o.f. due to unit control surface deflections.	Matrix
QGK	Basic name of the unsteady aerodynamic gust force vector containing the intermediated unsteady forces at K-set d.o.f	Matrix
SKJ	Integration matrix relating the unsteady aerodynamic pressure coefficients at the J-set d.o.f. to the unsteady aerodynamic forces at the K-set d.o.f.	Matrix
AJK	Basic name of the unsteady aerodynamic AIC matrix relating the displacements at the K-set d.o.f to the pressure coefficients at the J-set d.o.f.	Matrix
ACNTLK	Displacements and slopes defined at K-set d.o.f. due to unit anti-symmetric control surface deflection.	Matrix
SCNTLK	Translational and rotational displacements defined at G-set d.o.f. due to unit symmetric control surface deflection.	Matrix
SCNTLG	Displacements and slopes defined at K-set d.o.f. due to unit symmetric control surface deflection.	Matrix
ACNTLG	Translational and rotational displacements defined at G-set d.o.f. due to unit anti-symmetric control surface deflection.	Matrix
LMODEG	Translational and rotational displacements defined at G-set d.o.f due to the load modes specified in bulk entries **LOADMOD**.	Matrix
LMODEK	Displacements and slopes defined at K-set d.o.f due to the load modes specified in bulk entries **LOADMOD**.	Matrix
UGTKG	Spline matrix relating the structural displacements at G-set d.o.f to the displacements and slopes at the K-set d.o.f of the aerodynamic boxes, but stored in the transposed form.	Matrix
AECOMPZ	Contains data on the aerodynamic components in the **CAERO7** and **BODY7** bulk entries.	Relation
GEOMZA	Contains data on the aerodynamic boxes of the **CAERO7** and **BODY7** bulk entries.	Relation
AGRIDZ	Contains data of the corner grid points on the **CAERO7** and **BODY7** boxes.	Relation
REUNMK	Contains the relations between the unsteady aerodynamic matrices generated by the **UZAERO** module to the bulk entries **MKAEROZ**.	Relation

The ZAERO database entities are documented similar to those in the ASTROS Programmer's Manual (Ref 2). A Usage section has been added to aide and clearly define to the programmer data stored on each database entitiy.

Entity: **AJC**

Entity Type: MATRIX

Description: Basic name of the unsteady aerodynamic matrix containing unsteady pressure coefficients at J-set d.o.f. due to unit control surface deflections. **AJC** is used during the aeroservoelastic analysis.

Matrix Form: Complex matrix with number of columns being equal to the number of control surfaces and J-set number of rows being equal to the number of J-set d.o.f.

Created by: **UZAERO**

Usage:

AJC contains a three characters string 'AJC' defined by **MAPOL**. To retrieve the **AJC** of a given Mach number, reduced frequency pair and symmetry condition, please see entity **REUNMK**.

The actual matrix name stored on the data base is $\mathbf{AJC}_{siijj}$,

where s='S' for symmetric or asymmetric case, ='A' for antisymmetric case.
ii=index of Mach number.
jj=index of reduced frequency.

The matrix **QKC** defined as the unsteady aerodynamic forces due to unit control surface deflections at K-set is computed by:

$$[\mathbf{QKC}]=[\mathbf{SKJ}]^T[\mathbf{AJC}_{siijj}]$$

The unsteady generalized aerodynamic control forces **[QHCLFL]** is computed by:

$$[\mathbf{QHCLFL}]=[\mathbf{PHIKH}]^T[\mathbf{QKC}]$$

where **[PHIKH]** is the modal matrix at K-set d.o.f.

Therefore the number of rows of **[QHCLFL]** is the number of modes. Each column of **[QHCLFL]** corresponds to the generalized aerodynamic control forces due to each of the bulk entry **AESURFZ** with TYPE=SYM for $\mathbf{AJC}_{siijj}$ and TYPE=ANTISYM for $\mathbf{AIC}_{aiijj}$.

Entity:	**QGK**
Entity Type:	MATRIX
Description:	Basic name of the unsteady aerodynamic gust force vector containing the intermediated unsteady forces at K-set d.o.f. **QGK** is used by the aeroservoelastic gust analysis.
Matrix Form:	Complex matrix with one column and K-set number of rows.
Created by:	**UZAERO**

Usage:

QGK contains a three character string 'QGK' defined by **MAPOL**. To retrieve the **QGK** of a given Mach number, reduced frequency pair and symmetry condition, please see entity **REUNMK**.

The actual matrix name stored on the data base is $\mathbf{QGK}_{siijj}$,

where s='S' for symmetric or asymmetric case, ='A' for antisymmetric case.
ii=index of Mach number.
jj=index of reduced frequency.

The actual gust generalized forces in modal space is computed by:

$$[QGK_{siijj}] = [QGK_{siijj}] * \exp(i*k*x_o/(REFC/2.))$$

where x_o is the location of the reference plane defined in the bulk entry **GUST**.
k is the corresponding reduced frequency.
and REFC is the reference chord defined in bulk entry **AEROZ**.

Entity:	**SKJ**
Entity Type:	MATRIX
Description:	Integration matrix relating the unsteady aerodynamic pressure coefficients at the J-set d.o.f. to the unsteady aerodynamic forces at the K-set d.o.f.
Matrix Form:	Real matrix with J-set number of column and K-set number of rows but stored in the transposed form.
Created by:	**UZAERO**

Usage:

SKJ depends on the geometry of the aerodynamic model only and is independent of Mach number and reduced frequency.

Entity: **AJK**

Entity Type: MATRIX

Description: Basic name of the unsteady aerodynamic AIC matrix relating the displacements at the K-set d.o.f to the pressure coefficients at the J-set d.o.f.

Matrix Form: Complex matrix with K-set number of columns and J-set number of rows but stored in the transposed form.

Created by: **UZAERO**

Usage:

AJK contains a three characters string 'AJK' defined by **MAPOL**. To retrieve the **AJK** of a given Mach number, reduced frequency pair and symmetry condition, please see entity **REUNMK**.

The actual matrix name stored on the data base is $\mathbf{AJK}_{siijj}$,

where s='S' for symmetric or asymmetric case, ='A' for antisymmetric case.
ii=index of Mach number.
jj=ndex of reduced frequency.

The matrix **QKK** relating displacements at K-set to unsteady aerodynamic forces at K-set is computed by:

$$[QKK]=[SKJ]^{T}\,[AJK_{siijj}]^{T}$$

The unsteady generalized aerodynamic forces **[QHHLFL]** is computed by:

$$[QHHLFL]=[PHIKH]^{T}\,[QKK][PHIKH]$$

where **[PHIKH]** is the modal matrix at K-set d.o.f.

However, in the **FLUTQHHZ** module and **QHHLGENZ** module, **[QHHLFL]** is computed by the following procedure:

The unsteady aerodynamic pressure coefficients **[CP]** at J-set d.o.f. is first obtained

$$[CP]=[AJK_{siijj}]^{T}[PHIKH]$$

Then, the aerodynamic forces at K-set d.o.f are computed:

$$[FORCE]=[SKJ]^{T}[CP]$$

Finally, the generalized aerodynamic forces are computed:

$$[QHHLFL]=[PHIHK]^{T}[FORCE]$$

Matrices **[CP]** and **[FORCE]** are deleted after **[QHHLFL]** is obtained.

Entity:	**ACNTLK**
Entity Type:	MATRIX
Description:	Displacements and slopes defined at K-set d.o.f. due to unit anti-symmetric control surface deflection. Each column is corresponding to each **AESURFZ** bulk entry with TYPE=ANTISYM.
Matrix Form:	Real matrix with K-set number of rows and number of columns being equal to the number of **AESURFZ** bulk entries with TYPE=ANTISYM.
Created by:	**CONMOD**

Usage:

1. **ACNTLK** is used by both **UZAERO** and **SZAERO** modules.

   For the **UZAERO** module, it generates the **[AJC]** matrix for all **MKAEROZ** bulk entries by:

   $$[AJC]=[AJK]^T[ACNTLK]$$

   For the **SZAERO** module, it generates the matrix **[AIRFRC]** and the aerodynamic stability coefficients of control surfaces (stored in relation **STABCF**) for each **TRIM** bulk entry by:

   $$[AIRFRC]=[AAICMAT]^T[ACNTLK]$$

2. **ACNTLK** does not exist if there are no **AESURFZ** with TYPE=ANTISYM.

Entity:	**SCNTLK**
Entity Type:	MATRIX
Description:	Displacements and slopes defined at K-set d.o.f. due to unit symmetric control surface deflection. Each column is corresponds to each **AESURFZ** bulk entry with TYPE=SYM or ASYM.
Matrix Form:	Real matrix with K-set number of rows and number of columns being equal to the number of **AESURFZ** bulk entries with TYPE=SYM or ASYM.
Created by:	**CONMOD**

Usage:

1. **SCNTLK** is used by both the **UZAERO** and **SZAERO** modules.

   For **UZAERO** module, it generates the **[AJC]** matrix for all **MKAEROZ** bulk entries by:

   $$[AJC]=[AJK]^T[SCNTLK]$$

   For the **SZAERO** module, it generates the matrix **[AIRFRC]** and the aerodynamic stability coefficients of control surfaces (stored in relation **STABCF**) for each **TRIM** bulk entry by:

   $$[AIRFRC]=[AICMAT]^T[SCNTLK]$$

2. **SCNTLK** does not exist if there are no **AESURFZ** with TYPE=SYM or ASYM.

Entity:	**SCNTLG**
Entity Type:	MATRIX
Description:	Translational and rotational displacements defined at G-set d.o.f. due to unit symmetric control surface deflection. Each column corresponds to an **AESURFZ** bulk entry with TYPE=SYM or ASYM.
Matrix Form:	Real matrix with G-set number of rows and number of columns being equal to the number of **AESURFZ** bulk entries with TYPE=SYM or ASYM.
Created by:	**CONMOD**

Usage:

1. **SCNTLG** is used to compute the inertial matrix of the control surfaces in modal space by:

   [PHIG]^T**[MGG][SCNTLG]** in G-set d.o.f.

   or

   [PHIA]^T**[MAA][SCNTLA]** in A-set d.o.f. Where **[SCNTLA]** can be computed by the reduction of **[SCNTLG]** from G-set to A-set.

2. **SCNTLG** does not exist if there are no **AESURFZ** with TYPE=SYM or ASYM.

Entity:	**ACNTLG**
Entity Type:	MATRIX
Description:	Translational and rotational displacements defined at G-set d.o.f. due to unit anti-symmetric control surface deflection. Each column corresponds to an **AESURFZ** bulk entry with TYPE=ANTISYM.
Matrix Form:	Real matrix with G-set number of rows and number of columns being equal to the number of **AESURFZ** bulk entries with TYPE=ANTISYM.
Created by:	**CONMOD**

Usage:

1. **ACNTLG** is used to compute the inertial matrix of the control surfaces in modal space by:

   [PHIG]^T**[MGG][ACNTLG]** in G-set d.o.f.

   or

   [PHIA]^T**[MAA][ACNTLA]** in A-set d.o.f. Where **[ACNTLA]** can be computed by the reduction of **[ACNTLG]** from G-set to A-set.

2. **ACNTLG** does not exist if there are no **AESURFZ** with TYPE=ANTISYM.

Entity:	**LMODEG**
Entity Type:	MATRIX
Description:	Translational and rotational displacements defined at G-set d.o.f due to the load modes specified in bulk entries **LOADMOD**.
Matrix Form:	Real matrix with G-set number of rows and number of columns being equal to the number of **LOADMOD** bulk entries.
Created by:	**CONMOD**

Usage:

1. **LMODEG** is used to compute the sectional forces or moments at the structural grid points defined by the **LOADMOD** bulk entries. **LMODEG** can be reduced from G-set to A-set d.o.f. by the A-set reduction procedures.

2. **LMODEG** does not exist if there are no **LOADMOD** bulk data entries.

Entity:	**LMODEK**
Entity Type:	MATRIX
Description:	Displacements and slopes defined at K-set d.o.f due to the load modes specified in bulk entries **LOADMOD**.
Matrix Form:	Real matrix with K-set number of rows and number of columns being equal to the number of **LOADMOD** bulk entries.
Created by:	**CONMOD**

Usage:

1. **LMODEK** is used to compute the sectional forces or moments at the aerodynamic boxes defined by the **LOADMOD** bulk entries.

2. **LMODEK** does not exist if there are no **LOADMOD** bulk data entries.

Entity:	**UGTKG**
Entity Type:	MATRIX
Description:	Spline matrix relating the structural displacements at G-set d.o.f to the displacements and slopes at the K-set d.o.f of the aerodynamic boxes, but stored in the transposed form.
Matrix Form:	Real matrix with G-set number of rows and K-set number of columns.
Created by:	**SPLINZ**

Usage:

1. The definition of K-set d.o.f. is:

   For each aerodynamic box, six d.o.f.'s are assigned and defined as:

   {T1, T2, T3, d(T1)/dx, d(T2)/dx, d(T3)/dx}, where T1, T2, and T3 are the displacements at the centroid of the aerodynamic box along x, y, and z directions, respectively. d( )/dx denotes as the slope of ( ) with respect to the free stream direction (the x-axis of the aerodynamic coordinates).

   Therefore, for N number of aerodynamic boxes (number of J-set d.o.f.'s = N), number of K-set d.o.f.'s = 6 * N.

2. **[UGTKG]** can be reduced to **[UGTKA]** by the A-set reduction procedures, where **[UGTKA]** is used to transform the displacements at A-set to K-set and transform the aerodynamic forces from K-set to A-set by the transposed of **[UGTKA]**.

3. **[UGTKG]** is computed according to the **SPLINE1**, **SPLINE2**, **SPLINE3**, and **ATTACH** bulk entries.

Entity: **AECOMPZ**

Entity Type: Relation

Description: Contains data on the aerodynamic components in the **CAERO7** and **BODY7** bulk data entries.

Relation Attributes:

NAME	TYPE/KEY	DESCRIPTION
ACID	Integer>0	Identification number of **CAERO7** or **BODY7** bulk entries.
MACROTYP	Text(8)	Either 'CAERO7' or 'BODY7'.
GROUP	Integer	Identification number of the **ACOORD** bulk entry.
ACMPNT	Text(8)	Component type. One of WING or BODY.
TYPE	Integer>0	TYPE=2 for **CAERO7**, 3 for **BODY7**.
FIINTID	Integer>0	First internal aerodynamic box identification number.
NCBOX	Integer>0	Number of chordwise boxes for **CAERO7**. =1 for **BODY7**.
NSBOX	Integer>0	Number of spanwise boxes for **CAERO7**. Number of boxes for **BODY7**.
BNDRY	R Vector(12)	For **CAERO7**: BNDRY(i), i=1,3: x, y, z of leading edge at root. BNDRY(i), i=4,6: x, y, z of trailing edge at root. BNDRY(i), i=7,9: x, y, z of leading edge at tip. BNDRY(i), i=10,12: x, y, z of trailing edge at tip. For **BODY7**: BNDRY(i), i=1,3: x, y, z of the nose. BNDRY(4): base pressure of the body wake. BNDRY(5): X location of the steady point singularity of the body wake. BNDRY(6): X location of the unsteady point singularity of the body wake. BNDRY(i), i=7,8: Y and Z offset for the point singularity of the body wake. BNDRY(9): Body length. BNDRY(10): Flag for body wake. (Integer) BNDRY(11): Number of inlet boxes. (Integer) BNDRY(12): Number of wake boxes on the body.
WCOS		For **CAERO7**: Cos(theta), where theta = dihedral angle. For **BODY7**: Number of segments. (Integer)
WSIN		For **CAERO7**: Sin(theta), where theta = dihedral angle. For **BODY7**: Not used.
IWING	Integer	Flag for vertical fin on the X-Z plane. =0: yes. =1, no.
ATTR	Integer	=0: **CAERO7** root is not attached to **BODY7**. >0: **CAERO7** root is attached to **BODY7** with ID=ATTR. Not used for **BODY7**.
YRB	Real	Y location of the center line of **BODY7** to which the **CAERO7** root is attached.
ZRB	Real	Z location of the center line of **BODY7** to which the **CAERO7** root is attached.

FLCOSR	Real	Cos(theta), where theta is the dihedral angle of the vortex-carry-through boxes at root.
FLSINR	Real	Sin(theta), where theta is the dihedral angle of the vortex-carry-through boxes at root.
ATTT	Integer	=0: **CAERO7** Tip is not attached to **BODY7**. >0: **CAERO7** Tip is attached to **BODY7** with ID=ATTT Not used for **BODY7**.
YTB	Real	Y location of the center line of **BODY7** if **CAERO7** tip is attached to it.
ZTB	Real	Z location of the center line of **BODY7** if **CAERO7** root is attached to it.
FLCOST	Real	Cos(theta), where theta is the dihedral angle of the vortex-carry-through boxes at tip.
FLSINT	Real	Sin(theta), where theta is the dihedral angle of the vortex-carry-through boxes at tip.
LABEL	Text(8)	Label of **CAERO7** or **BODY7** bulk entries.

Created by: **AEROGM**

Usage:

AECOMPZ is used by **SPLINZ**, **UZAERO** and **SZAERO** modules.

Entity: **GEOMZA**

Entity Type: Relation

Description: Contains data on the aerodynamic boxes of the **CAERO7** and **BODY7** bulk data entries.

Relation Attributes:

NAME	TYPE/KEY	DESCRIPTION
MACROID	Integer	Component identification number of the associated **CAERO7** or **BODY7**.
ACMPNT	Text(8)	='FUSEL' for **BODY7** box, ='WING' for **CAERO7** box.
NDOF	Integer	=3 for **BODY7** box, =2 for **CAERO7** box.
EXTID	Integer	External identification number of the box.
INTID	Integer	Internal identification number of the box.
AREA	Real	Area of the box.
X	Real	X location of centroid of the box.
Y	Real	Y location of centroid of the box.
Z	Real	Z location of centroid of the box.
N1	Real	X component of the box normal in basic coordinates.
N2	Real	Y component of the box normal in basic coordinates.
N3	Real	Z component of the box normal in basic coordinates.
R1	Real	X component of the box local pitch axis in basic coordinates.
R2	Real	Y component of the box local pitch axis in basic coordinates.
R3	Real	Z component of the box local pitch axis in basic coordinates.
RTHETA	Real	For **BODY7** box: dihedral angel of the box. For **CAERO7** box: Thickness slope at 50% chord.
RDELTA	Real	For **BODY7** box: Inclination angel of the box. For **CAERO7** box: Camber slope at 50% chord.
CHORD	Real	Chord length.
ID1	Integer	Aerodynamic grid identification number at left hand side corner of the box leading edge.
ID2	Integer	Aerodynamic grid identification number at left hand side corner of the box trailing edge.
ID3	Integer	Aerodynamic grid identification number at right hand side corner of the box leading edge.
ID4	Integer	Aerodynamic grid identification number at right hand side corner of the box trailing edge.
CAM85	Real	Camber slope at 85% chord for **CAERO7** box. Not used for **BODY7** box.
CAM95	Real	Camber slope at 95% chord for **CAERO7** box. Not used for **BODY7** box.
DZX85	Real	Thickness slope at 85% chord for **CAERO7** box. Not used for **BODY7** box.
DZX95	Real	Thickness slope at 95% chord for **CAERO7** box. Not used for **BODY7** box.

DZXLE	Real	Thickness slope at leading edge of the mid-chord for **CAERO7** box. Not used for **BODY7** box.
DZXTE	Real	Thickness slope at trailing edge of the mid-chord for **CAERO7** box. Inlet panel flow ratio in percentage for **BODY7** box.
IWAKE	Integer	For **BODY7** box=1, box is inlet panel. =0, box is not inlet panel. Not used for **CAERO7** box.

Created by: **AEROGM**

Usage:

GEOMZA is used by **SPLINZ**, **UZAERO** and **SZAERO** modules.

Entity: **AGRIDZ**

Entity Type: Relation

Description: Contains data of the corner grid points on the **CAERO7** and **BODY7** boxes.

Relation Attributes:

NAME	TYPE/KEY	DESCRIPTION
EXTID	Integer>0	External identification of the grid point.
INTID	Integer>0	Internal identification of the grid point.
CORD	Integer	Identification number of **ACOORD** bulk entry.
X	Real	X location of the grid point.
Y	Real	Y location of the grid point.
Z	Real	Z location of the grid point.

Created by: **AEROGM**

Usage:

AGRIDZ is used by **UZAERO** and **SZAERO** modules.

Entity: **REUNMK**

Entity Type: Relation

Description: Contains the relations between the unsteady aerodynamic matrices generated by the **UZAERO** module to the bulk entries **MKAEROZ**.

Relation Attributes:

NAME	TYPE/KEY	DESCRIPTION
IDMK	Integer>0	Identification number specified in the bulk entries **MKAEROZ**.
MACH	Real≥0.	Mach number specified in bulk entries **MKAEROZ**.
METHOD	Integer	Method flag specified in bulk entries **MKAEROZ**.
SYMXZ	Integer	Symmetry flag. SYMXZ=1 for symmetric case, =-1 for antisymmetric case, =0 for asymmetric case.
ALPHA	Real	Angle of attack specified in the **TRIMFLT** bulk entry of the current **MKAEROZ**.
BETA	Real	Side slip angle specified in the **TRIMFLT** bulk entry of the current **MKAEROZ**.
PRATE	Real	Non-dimensional roll rate specified in the **TRIMFLT** bulk entry of the current **MKAEROZ** bulk entry of the current **MKAEROZ**.
QRATE	Real	Nondimensional pitch rate specified in the **TRIMFLT** bulk entry of the current **MKAEROZ**.
RRATE	Real	A non-dimensional yaw rate specified in the **TRIMFLT** bulk entry of the current **MKAEROZ**.
MINDEX	Integer>0	Index of the **MKAEROZ** bulk entry ranging from 1 to the number of the **MKAEROZ** bulk entries.
KINDEX	Integer>0	Index of the reduced frequency ranging from 1 to the number of reduced frequencies specified in the current **MKAEROZ**.
RFREQ	Real>0.0	The KINDEX'th reduced frequency specified in the current **MKAEROZ**.

Created by: **UZAERO**

Usage:

The **UZAERO** module generates the unsteady aerodymanic matrices **[AJK]**, **[AJC]**, and **[QGK]** of all **MKAEROZ** bulk entries in the input file regardless of whether or not they are required for the downstream unsteady aeroelastic modules. To retrieve these matrices, please see the example on the following page:

For a given pair of IDMK and SYMXZ found in either the **FLUTTER** or **GUST** bulk entry, to retrieve the corresponing matrix [AJK]:

```
      CHARACTER*8 UNLIST(12),NAME
      DATA UNLIST/'IDMK','MACH','METHOD','SYMXZ','ALPHA','BETA','PRATE','QRATE'
     *                          ,'RRATE','MINDEX','KINDEX','RFREQ'/
      INTEGER INFO(20),IGET(12),MINDEX(100),KINDEX(100),SYMXZ
      REAL RGET(12),K(100),MACH
      EQUIVALENCE (RGET(1),IGET(1))
      CHARACTER*1 S
      CALL DBOPEN(REUNMK,INFO,'RO','NOFLUSH',ISTAT)
      CALL REPROJ(RENUMK,12,UNLIST)
      NMK=INFO(3)
C                NMK = total number of MKAEROZ bulk entries.
      INDEX=0
      DO I=1,NMK
              CALL REGET(REUNMK,IGET,ISTAT)
               IF(IDMK.EQ.IGET(1)) THEN
                       INDEX=INDEX+1
                       MACH=REGET(2)
                       METHOD=IGET(3)
                        ISYM=IGET(4)
                       MINDEX(INDEX)=IGET(10)
                       KINDEX(INDEX)=IGET(11)
                       K(INDEX)=RGET(12)
               ENDIF
      ENDDO
      CALL DBCLOS(REUNMK)
      KTOTAL=INDEX
C  KTOTAL is the total number of reduced frequencies specified in the MKAEROZ bulk entry
C  with IDMK as the identification number.
C  IF one wishes to retrive the [AJK] matrix of the second reduced frequency, do the
C  following:
      KTH=2
      IF(SYMXZ.EQ.1.OR.SYMXZ.EQ.0) THEN
              S='S'
      ELSE
              S='A'
      ENDIF
C Subroutine MYNAME is an utility routine to assemble the matrix name.
C INPUT:  AJK          A three characters string contains the basic name of the matrix.
C              S='S' for symmetric or asymmetric case, ='A' for antisymmetric case.
C             MINDEX(KTH)      KTH'th Mach number index  found in the REUNMK realtion.
C             KINDEX(KTH)     KTH'th reduced frequency index found in the REUNMK relation.
C OUTPUT: A character*8 string of the matrix created by UZAERO module with the form:
C                      AJKsiijj, where s=S, ii=MINDEX(KTH), and jj=KINDEX(KTH)
      CALL MYNAME(AJK,S,MINDEX(KTH),KINDEX(KTH),NAME)
C Now, NAME is the matrix name of the AIC matrix of the corresponding Mach number and
C reduced frequency.
       CALL MYNAME(AJC,S,MINDEX(KTH),KINDEX(KTH),NAME)
C Now, NAME is the matrix name of the control surface forces matrix of the corresponding
C Mach number and reduced frequency.
       CALL MYNAME(QGK,S,MINDEX(KTH),KINDEX(KTH),NAME)
C Now, NAME is the matrix name of the gust force matrix of the corresponding
C Mach number and reduced frequency.
C      .....................
C      .....................

ASTROS* MAPOL SEQUENCE LISTING

The following ASTROS* MAPOL sequence listing documents all changes made to the original ASTROS MAPOL sequence. All newly added lines and commented lines for integration of ZAERO into ASTROS are highlighted in boldfaced text. Arrows are also used at the ends of the lines to demarcate the beginning and ending of changes.

ASTROS* MAPOL Sequence Listing:

APPENDIX E

ZAERO ERROR MESSAGE DEFINITION

(SERRMSG.DAT)

In following the ASTROS format for error message definitions, three new error message modules (numbers 35 through 37) have been generated for the ZAERO software and added to the SERRMSG.DAT file. These ZAERO error message modules are listed as follows:

```
*MODULE 35     ZONA'S AEROGM MODULE MESSAGES
'NO $ BULK DATA ENTRIES ARE DEFINED, BUT BODY7 BULK DATA EXISTS IN THE INPUT.'
'$ BULK DATA ENTRY WITH BID: $ HAS $ NUMBER OF SEGMENTS, BUT THERE ARE ONLY $ NUMBER OF SEGMESH '
'BULK DATA ENTRIES DEFINED.'
'BULK DATA ENTRY $ IS REFERED BY A ID: $ BUT NO $ EXISTS IN THE INPUT.'
'ID NUMBER: $ OF BULK DATA CARD $ IS NOT DEFINED.'
'BULK DATA ENTRY $ WITH ID: $ , REFERS TO BULK DATA ENTRY $ WITH ID: $ WHICH DOES NOT EXIST.'
'$ BULK DATA CARD WITH ID: $ SPECIFIES $ NUMBER OF AXIAL STATIONS, BUT ONLY $ ARE DEFINED.'
'THE X-LOCATIONS OF A $ BULK DATA ENTRY WITH IDMESH: $ ARE NOT IN ASCENDING ORDER AT AXIAL STATIONS $ AND $.'
'$ WITH WID: $ HAS $ NUMBER OF SPANWISE DIVISIONS DEFINED, BUT THERE ARE $ NUMBER OF VALUES'
'LISTED IN THE CORRESPONDING $ BULK DATA ENTRY WITH ID: $ .'
'$ WITH ID: $ REFERENCED BY $ WITH WID: $ DOES NOT BEGIN WITH 0.0 OR END AT 100.0.'
'THE SPANWISE DIVISIONS OF A $ BULK DATA CARD, ID: $ REFERENCED BY A $ CARD WITH WID: $, ARE NOT'
'IN ASCENDING ORDER.'
'THE TOTAL NUMBER OF MACH NUMBERS LISTED IN ALL MACHCP BULK DATA ENTRIES EXCEEDS 6.'
'CAERO7 ENTRY WITH WID: $, HAS NO STEADY PRESSURE INPUT ON SPANWISE STRIP INDEX = $ AND MACH NUMBER = $.'
'THEREFORE LINEAR UNSTEADY PRESSURE WILL BE COMPUTED FOR THIS STRIP.'
'CAERO7 ENTRY WITH WID: $, HAS MORE THAN ONE SPANWISE STRIP INDEX DEFINED FOR A MACHCP BULK DATA ENTRY'
'FOR SPANWISE STRIP INDEX = $ AND MACH NUMBER = $.'
'AERODYNAMIC $ ID: $ IS TOO LARGE BASED ON AVAILABLE MEMORY.'
'A DUPLICATE AERODYNAMIC $ EXISTS WITH ID: $ .'
'A SEGMESH BULK DATA CARD WITH IDMESH: $ HAS $ NUMBER OF $-VALUE CIRCUMFERENTIAL POINTS (NRAD) DEFINED,'
'BUT THERE ARE ONLY $ NUMBER OF VALUES LISTED IN AEFACT WITH ID: $.'
'A $ WITH ID: $ HAS A BOX OF ZERO AREA WITH ID: $.'
'ERROR IN $ WITH ID: $. INCOMPLETE LIST OF LABEL-HINGE-INBDY-OUTBDY PAIRS FOR NFLAP = $.'
'ERROR IN $ WITH ID: $. ENTRY LABEL = $ IS NOT $ OR $.'
'ERROR IN $ WITH ID: $. ENTRY HINGE = $ IS NOT GREATER THAN 1 AND LESS THAN $ (NCHORD).'
'ERROR IN $ WITH ID: $. ENTRY INBDY = $ IS NOT GREATER OR EQUAL TO 1 AND LESS THAN $ (NSPAN).'
'ERROR IN $ WITH ID: $. ENTRY OUTBDY = $ IS NOT GREATER THAN 1 AND LESS THAN OR EQUAL TO $ (NSPAN).'
'ERROR IN $ WITH ID: $. ENTRY INBDY = $ IS GREATER THAN OR EQUAL TO ENTRY OUTBDY = $.'
'A $ BULK DATA CARD WITH ID: $ HAS A SPANWISE INDEX (SPANID) = $ WHICH IS LESS THAN 1 OR GREATER THAN THE'
'NUMBER OF SPANWISE BOXES (NSPAN) = $.'
'A $ BULK DATA CARD WITH ID: $ DOES NOT HAVE COMPLETED X-CPU-CPL PAIRS (I.E. IN THREES).'
'A $ BULK DATA CARD WITH ID: $ HAS A X-LOCATION VALUE GREATER THAN 100 PERCENT CHORD.'
'A $ BULK DATA CARD WITH ID: $ HAS X-LOCATION VALUES THAT ARE NOT IN ASCENDING ORDER.'
'A $ BULK DATA CARD WITH ID: $ HAS CHORDWISE X-VALUES THAT ARE NOT IN ASCENDING ORDER,'
'SPECIFIED IN $ BULK DATA CARD WITH ID: $.'
'A $ BULK DATA CARD WITH ID: $ HAS CHORDWISE X-VALUES THAT DO NOT START WITH 0.0 OR END WITH 100.0'
'IN $ BULK DATA CARD WITH ID: $.'
'A $ BULK DATA CARD WITH ID: $ SPECIFIES $ (ITAX) NUMBER OF CHORDWISE HALF THICKNESS VALUES ($),'
'BUT ONLY $ ARE LISTED IN THE CORRESPONDING $ BULK DATA CARD WITH ID: $.'
'A $ BULK DATA CARD WITH ID: $ SPECIFIES $ (ITAX) NUMBER OF CHORDWISE CAMBER VALUES ($),'
'BUT ONLY $ ARE LISTED IN THE CORRESPONDING $ BULK DATA CARD WITH ID: $.'
'A $ BULK DATA CARD WITH WID: $ HAS $ NUMBER OF CHORDWISE DIVISIONS (NCHORD) SPECIFIED,'
'BUT ONLY $ VALUES ARE LISTED IN THE CORRESPONDING $ BULK DATA CARD WITH ID: $.'
'A $ BULK DATA CARD WITH ID: $ REFERENCED BY A $ BULK DATA CARD WITH ID: $'
'IS NOT DEFINED AS THE CENTERLINE OF THE BODY.'
'A $ WING MACROELEMENT WITH WID: $ HAS ZERO AREA.'
'DUPLICATED ID IN BULK DATA CARD $ WITH ID: $.'
'ERROR IN BULK DATA ENTRY $ WITH ID: $. NUMBER OF INLET PANELS EQUALS $ (INLET).'
'BUT THERE ARE $ NUMBER OF BOX ID SPECIFIED.'
```

```
*MODULE 36     ZONA'S SPLINZ MODULE MESSAGES
'$ ENTRY $ REFERENCES AN AERODYNAMIC BODY COMPONENT.  ONLY WING-LIKE COMPONENTS ALLOWED.'
'COORDINATE SYSTEM $, REFERENCED ON $ ENTRY $, CANNOT BE FOUND.'
'GRID POINT $, REFERENCED ON $ ENTRY $, CANNOT BE FOUND.'
'$ ENTRY $ REFERENCES STRUCTURAL SET DEFINITION $ THAT DOES NOT EXIST.'
'THE STRUCTURAL SET DEFINED BY SET2 ENTRY $, REFERENCED ON $ ENTRY $, IS EMPTY.'
'THE STRUCTURAL POINT DEFINITION PRISM DEFINED BY SET2 ENTRY $ ON $ ENTRY $ HAS ILLEGAL GEOMETY.'
'$ ENTRY $ RESULTS IN A SINGULAR TRANSFORMATION MATRIX.'
'AERODYNAMIC BOX WITH INTERNAL IDENTIFICATION NUMBER $ HAS BEEN SPLINED MORE THAN ONCE.'
'$ ANALYSES ARE REQUESTED IN SOLUTION CONTROL BUT NO SPLINE OR ATTACH ENTRIES EXIST.'
'NO COORDINATE SYSTEM FOR THE SPLINE Y-AXIS IS DEFINED ON $ ENTRY $.'
'  WHEN USED ON A LIFTING SURFACE A CID MUST BE SUPPLIED.'
'$ SETID $ SPECIFIES NON-EXISTENT MACRO-ELEMENT $.'
'$ SETID $ SPECIFIES NON-EXISTENT AERODYNAMIC BOXES FOR MACRO-ELEMENT $.'
'THE RECTANGULAR REGION SPECIFIED BY BOX1 AND BOX2 ON $ SETID $ CONTAINS NO AERODYNAMIC BOXES.'
'$ SETID $ SPECIFIES MORE BOXES THAN EXIST IN THE AERODYNAMIC MODEL.'
'$ SETID $ SPECIFIES DUPLICATE AERODYNAMIC BOXES MACROID $, EXTID $.'
```

```
'$ SETID $ SPECIFIES NON-EXISTENT AERODYNAMIC BOX MACROID $, EXTID $.'
'COORD SYS $, REFERENCED ON $ ENTRY, CANNOT BE FOUND.'
'$ $ SPECIFIES A SPLINE PLANE WHICH IS NEARLY PERPENDICULAR TO THE FREE STREAM VELOCITY.'
'$ SETID $ SPECIFIES AERODYNAMIC BOXES BELONGING TO MORE THAN ONE MACRO-ELEMENT.'
'$ SETID $ FAILS WHEN USING DEFAULT SPLINE PLANE (CP=BLANK) BECAUSE THE BOUNDARY FOR'
'   MACRO-ELEMENT $ DOES NOT DEFINE A PLANE.  USE CP OPTION TO SPECIFY A REFERENCE PLANE.'
'SPLINE2 WITH ID: $ CAN ONLY BE USED WITH CAERO7.'
'AERODYNAMIC GRID WITH INTERNAL ID: $ CANNOT BE FOUND IN ATTACH BULK DATA ENTRY.'
'STRUCTURAL GRID WITH EXTERNAL ID: $ CANNOT BE FOUND IN ATTACH BULK DATA ENTRY.'
'SPLINE2 WITH ID: $ HAS LESS THAN TWO STRUCTURAL GRIDS.'
'$ WITH ID: $ ERROR. STRUCTURAL GRID WITH INTERNAL ID: $ CANNOT BE FOUND.'
'SPLINE2 WITH ID: $ HAS TWO STRUCTURAL GRIDS WITH ID: $ AND $ THAT SHARE THE SAME '
'  LOCATION ALONG THE LINE OF THE SPLINE.'
'THE $ $ AERODYNAMIC BOX IS NOT ATTACHED TO THE STRUCTURE, THEREFORE, NO DISPLACEMENT'
'  IS ASSUMED FOR THIS BOX.'
'AERODYNAMIC GRID WITH INTERNAL ID: $ CANNOT BE FOUND.'
'SPLINE1 WITH ID: $ SPECIFIES A SPLINE PLANE WHICH IS NEARLY PERPENDICULAR TO THE FREE'
'   STREAM VELOCITY.'
'$ WITH ID: $ REFERS TO A SETi THAT HAS LESS THAN $ GRIDS.'
'$ WITH ID: $ REFERS TO A SETi THAT HAS ALL GRIDS ALIGNED ALONG A LINE.'
'$ WITH ID: $ REFERS TO A SETi THAT HAS TWO GRIDS AT THE SAME LOCATION.'
'$ WITH ID: $ GIVES A SINGULAR MATRIX.'
'A REFERENCED LOCAL COORDINATE SYSTEM WITH ID: $ CANNOT BE FOUND.'
'SPLINE3 WITH ID: $ REFERS TO A SETi THAT HAS ALL GRIDS LOCATED ON THE SAME PLANE.'
'  THE NORMAL VECTOR OF THE PLANE IS XN = $, YN = $, ZN = $ .'
```

```
*MODULE 37      ZONA'S ZAEROM MODULE MESSAGES
'$ WITH ID: $ HAS DUPLICATED REDUCED FREQUENCIES.'
'THERE IS NO CAERO7 OR BODY7 INPUT FOR THE ZAERO MODULE.'
'THERE IS NO OR MORE THAN ONE $ INPUT FOR THE ZAERO MODULE STEADY/UNSTEADY AERODYNAMIC ANALYSIS.'
'REFERENCE GRID ID FOR MOMENT CENTER (GREF = $) REFERENCED IN $ DOES NOT EXIST.'
'THE CONTROL POINT OF AN AERODYNAMIC BOX WITH ID: $ LOCATED ON A CAERO7 WING MACROELEMENT'
'  WITH WID: $ ALIGNS WITH THE EDGE OF ANOTHER AERODYNAMIC BOX WITH ID: $ LOCATED ON A'
'  CAERO7 WITH WID: $.'
'THE CONTROL POINT OF AN AERODYNAMIC BOX WITH INTERNAL ID: $ LOCATED ON A CAERO7 WITH INTERNAL'
'  ID: $ ALIGNS WITH THE EDGE OF ANOTHER AERODYNAMIC BOX WITH INTERNAL ID: $ LOCATED ON A'
'  CAERO7 WITH INTERNAL ID: $.'
```
